Quality Drape Forming

Drape forming is a technique using a single positive mold, on which a heated sheet of plastic is placed. After the sheet is softened by thermal processing, it sags and conforms to the shape of the mold under its own weight or by slight pressure applied by an operator.

QuickTurn capability is available.

Markets Served

OEM manufacturers in the following industries:

- Recreation
- Utility vehicles
- Motorcycles

- Sign manufacturers
- Lighting fixture manufacturers
- Graphics companies
- Recreation after market companies

Materials

- Thermoplastics
- Polycarbonate
